PRECISION MEASURING CENTERS

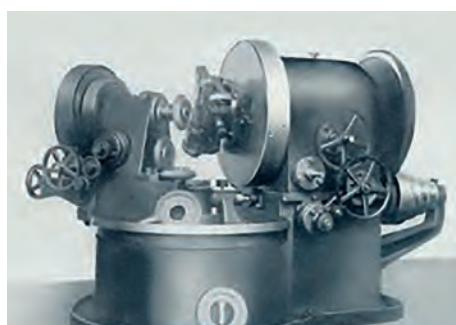

VALID FROM MAY 2022

INNOVATIONS MADE BY KLINGELNBERG

Leading the market in gearing technology – with tradition, expertise and passion

The first hobbing machine built at the Hückeswagen plant, model FK 150, construction year 1923

The Klingelnberg Group is a leading company in the gearing industry. This includes developing and manufacturing machines for **bevel gear and cylindrical gear machining** and **precision measuring centers for axially symmetrical components and gearing**. We also manufacture spiral-cut bevel gears to customer specifications – with ultimate precision using in-house technology.

The origins of this machine manufacturer date back to 1863. Still today, the Klingelnberg family remains invested in the company as an anchor shareholder. The path from the company's origins to global market leadership has been shaped by a continuous striving toward first-rate quality and absolute reliability, both for products and service. With numerous R&D engineers worldwide and more than 200 registered patents, the company demonstrates its capacity for innovation each and every day.

Klingelnberg operates engineering and manufacturing facilities in Switzerland, Germany, and Hungary. Furthermore, we guarantee our global presence with regional sales and service offices. The DIN EN ISO 9001 and DIN EN ISO 14001 certifications and participation in the VDMA's "Blue Competence" initiative underscore our sustainable and environmentally sound business practices.

A leader in gear measuring technology for future-proof quality management of drive elements

Stringent precision requirements for gearing measurements and increasingly complex drive components demand the best measuring technology available and a machine and software concept optimized for these applications. That's why leading manufacturers put their trust in Klingelnberg precision measuring centers, which represent the most widely used standard in the industry, while also serving as the reference for metrology institutes.

Klingelnberg precision measuring centers (P-series) already accommodate the majority of measurement tasks in a broad range of industries. Users in the automotive and commercial vehicle industries, the aerospace and aeronautical engineering industries, as well as the wind power industry rely on this technology, which replaces up to six conventional measuring devices. This allows the following measurement tasks to be fully automated in a single setup:

- Gear measurement
- General coordinate measurement
- Form and position measurement
- Roughness measurement
- Contour measurement
- Optical measurement

KLINGELNBERG P 65

The modular concept used in the P-series offers precision measuring centers in just the right size with a broad range of applications to provide the utmost in accuracy:

- Precision measuring centers for workpieces up to 3800 mm in diameter and up to 20,000 kg in weight
- Gear measurements starting from a module of 0.1 mm

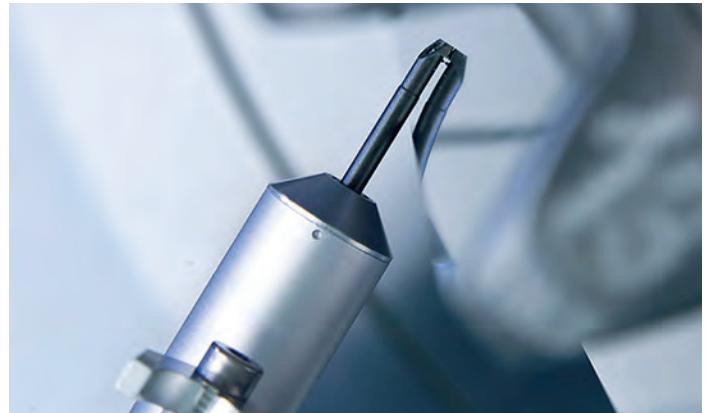

GEAR MEASUREMENT

Precise manufacturing of premium products

For decades, Klingelnberg precision measuring centers stand for accuracy, robustness and durability. Systematic advancement and innovative capacity on the part of the machine manufacturer have turned "gear measuring devices" into multifunctional, multi-sensor precision measuring centers. Consequently, almost any measurement task involving axially symmetrical components can be performed today – thanks to an extensive range of accessories.

The importance of surface quality has increased significantly in terms of gearing as well for as other machine elements. With the P-series from Klingelnberg, surface roughness on external and internal gearing can be measured, evaluated and documented in a fully automatic process, starting from modules as

small as 0.9 mm. Outside and inside diameters of shaft-shaped and circular components can also be measured. All Klingelnberg precision measuring centers can be equipped with various retrofit packages at the customer's request. The most recent technical highlight is Klingelnberg Optical Metrology, which can also be retrofitted on every machine in the P-series. Klingelnberg Optical Metrology is a clever combination of tactile and optical measuring technology. An extremely rapid changeover from the tactile system to the optical sensor makes this a hybrid system that combines the advantages of both measurement methods.

Klingelnberg Precision Measuring Centers

- Gear measurement for a broad range of profile types
- Bevel gear testing against target coordinates or a master gear
- Measurement of distances, angles, diameters and positions; Fourier analysis evaluation
- Form measurement such as roundness, straightness, flatness and cylindrical shape
- Complete measurement of hobs
- Measurement of shaving cutters and shaper type cutters
- Measurement of sprockets, cycloids and other gearing against coordinates
- Analysis of waviness on cylindrical gears
- Roughness measurement on gearing and axially symmetrical components
- Optical measurement on gearing and shaft-shaped components

SYSTEM COMPONENTS AND MODULES

Leading technology for maximum safety and precision

A precise, heavy-duty rotary table is the central element in a precision measuring center. This rotary table is configured as a measuring axis (**C axis**) and provides concentric seating of the workpieces to be tested. In combination with the three linear measuring axes, tangential (**X axis**), radial (**Y axis**) and

vertical (**Z axis**), the precision measuring centers trace and inspect the functional surfaces of gearing and general drive components in generator mode. This guarantees maximum measuring accuracy and reproducibility.

Key to symbols for the product tables

| | |
|---------------|-----------------------------------|
| D | = Diameter |
| d | = Stylus sphere diameter |
| ds | = Shaft diameter |
| ds1 | = Active shaft diameter |
| $\emptyset D$ | = Seating diameter for shaft |
| Da | = Nominal diameter |
| L | = Length |
| ML1 | = Length of active shaft diameter |
| ML2 | = Length of shaft diameter |
| ML | = Total length of shaft |
| M5 | = Metric ISO thread 5 mm |

| | |
|---------------|---|
| M42M | = Digital rotating 2D probing system |
| M43M | = Digital 3D probing system (locking button) |
| M44M | = Digital 3D probing system, temperature-neutral |
| R | = Stylus surface radius |
| $\emptyset A$ | = Seating diameter for tip |
| W | = Clamping range for shaft |
| B | = Clamping range for bore hole |
| WAF | = Width across flats |
| No. | = Number |
| Qty. | = Quantity |
| KL special | = Special version, available only from Klingelnberg |

STYLUS ELEMENTS

| | | | |
|--|----|--|----|
| Stylus construction kit | 09 | Stylus holders | 17 |
| Ball-type stylus pin | 12 | Stylus rods for internal gearing | 18 |
| Ball-type stylus | 13 | Needle styluses | 18 |
| Extension pieces (titanium 11 mm) | 14 | Stylus rods, special version | 19 |
| Accessories for extension pieces D = 11 mm | 15 | Special styluses for blades | 19 |
| Change disks | 16 | | |

ROUGHNESS SYSTEMS

| | |
|---|----|
| Roughness styluses, angled | 21 |
| Roughness styluses for internal gearing | 21 |

GAUGES AND STANDARDS

| | | | |
|--|----|--------------------------------------|----|
| Stylus set-up gauge D = 15 mm | 23 | SFP standard | 24 |
| Stylus set-up gauge D = 5 mm | 23 | SFP multi-wave standard | 24 |
| Stylus set-up gauge D = 2 mm | 23 | Roughness standard | 24 |
| Gearing standard / lead standard | 24 | Seating and inspection mandrel | 25 |

CLAMPING DEVICES, THREE-JAW QUICK-ACTION CHUCKS AND FACE PLATES

| | | | |
|---|----|----------------------------------|----|
| Three-jaw quick-action chuck D < 70 mm | 27 | Face plates | 29 |

STYLUS ELEMENTS

Stylus elements and extension pieces

Owing to their design and workmanship, Klingelnberg stylus elements provide key advantages compared with standard products:

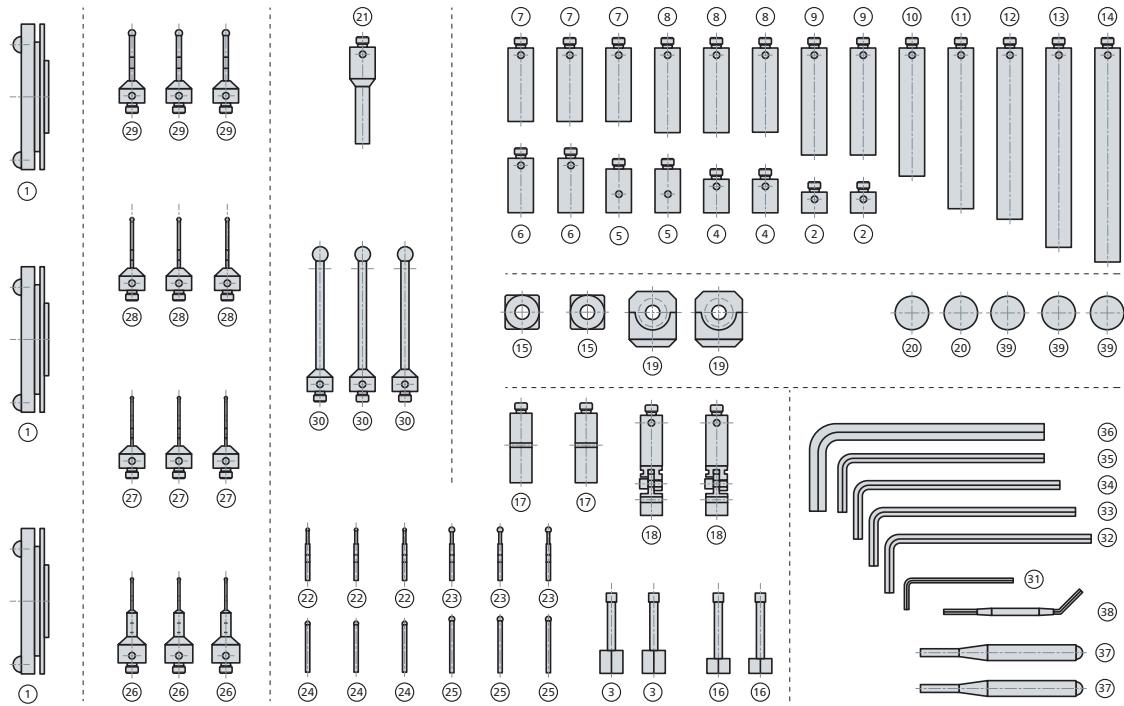

- Longer service life
- Optimized shaft contours
- Less bending

And thanks to advanced machining methods, we offer superior quality with our Klingelnberg extension piece elements, along with low weight and extreme rigidity.

- Stylus construction kit
- Ball-type stylus pin
- Stylus elements
- Extension pieces (titanium 11 mm)
- Accessories for extension pieces D = 11 mm
- Stylus holder
- Stylus rods for internal gearing
- Stylus rods, special version
- Needle styluses
- Special styluses for blades

Configuring stylus combinations with the Klingelnberg Stylus Manager

The modern interface of the "Stylus Manager" software supports easy configuration of stylus combinations. Stylus sphere calibration is made extremely user-friendly through the use of templates or free input.

ROUGHNESS STYLUS SYSTEMS

Roughness stylus systems

The surface quality of gearing and bearing surfaces is increasingly coming into focus due to steadily growing requirements for load capacity, service life and noise.

Roughness stylus systems for external and internal surfaces as well as gearing provide optimal prerequisites for measuring surface roughness reliably, reproducibly and fully automatically.

- Roughness styluses
- Roughness styluses, angled
- Roughness styluses for internal gearing

Skid roughness stylus systems

GAUGES AND STANDARDS

Gauges and standards

For years, the traceability of measuring results to certified standards has been a guarantee for the absolute precision of the measurement. Ease of use of the involute and lead standards, as well as the pitch standards and dimension, form, and position standards, ensures proper qualitative and quantitative quality monitoring. Using certified standards, the positions and probing errors of stylus elements are checked and calibrated at regular intervals to reliably detect and eliminate temporary environmental and wear influences.

- Stylus set-up gauge D = 15 mm
- Stylus set-up gauge D = 5 mm
- Stylus set-up gauge D = 2 mm
- Gearing standard / lead standard
- Pitch standard
- SFP standard
- SFP multi-wave standard
- Standard for rotary table guide
- Roughness standard
- Seating and inspection mandrel

CLAMPING DEVICES, THREE-JAW QUICK-ACTION CHUCKS AND FACE PLATES

Clamping devices, three-jaw quick-action chucks and face plates

A secure, quick and precise workpiece fixture for the measurement is becoming increasingly important, given that measurement times are continually decreasing as a result of innovative software solutions. Reducing set-up times is a key measure for minimizing floor-to-floor times.

- Three-jaw quick-action chuck D < 70 mm
- Three-jaw quick-action chuck D < 125 mm

An additional counter board may also be required.

SERVICE

Always on the leading position

Klingelnberg training courses in measuring technology are offered throughout the year, either according to the training schedule or as mutually agreed.

Participants in these courses learn skills in the relevant measurement methods and the software designed for these methods. Alongside theory, participants receive practical training on current Klingelnberg precision measuring centers and specific workpieces from the production floor.

- Small groups of no more than six to eight participants
- Pool of instructors comprising 15 application engineers

Recertification of standards ensures reliable precision for production and quality management and involves routine inspection at regular intervals of calibration standards subject to high demands.

Available services:

- Recertification of gearing standards and dimension, form and position standards
- Recertification of stylus set-up gauges

Training

| Designation | Art. No. Software Module | Art. No. Training | Duration |
|---|-----------------------------|----------------------|---------------|
| Training for clutch gearing | 590.097 | 590.600 | 2 days |

KLINGELNBERG Service

The KLINGELNBERG Group is a world leader in the development and manufacture of machines for bevel gear and cylindrical gear production, and precision measuring centers for gearing and axially symmetrical components, as well as the production of customized high-precision drive components. In addition to the headquarters in Zurich, Switzerland, further development and production facilities are located in Hückeswagen and Ettlingen, Germany.

The company also maintains a presence with Sales and Service offices and numerous marketing agents. On this basis, Klingelnberg offers users a comprehensive range of services for all aspects of toothed gear design, manufacturing, and quality inspection. The spectrum includes technical consulting, on-site machine acceptance, operator and software training as well as maintenance contracts.

KLINGELNBERG Solutions

Klingelnberg solutions are used in the automotive, commercial vehicle, and aviation industries, as well as in shipbuilding, the wind power industry, and the general transmission manufacturing industry. With numerous R&D engineers around the globe and over 200 registered patents, the company consistently demonstrates its capacity for innovation.
